# MyClassOnline Project

MyClassOnline is intended for parents of grade school students who wish to exchange contact information. The team is dedicated to making the site easy to use while also maintaining a responsive design to allow parents to access the website even on their mobile phone browsers. Similarly, we view security and user privacy as essential, and we plan to see this through in our design.

### The Team

### Chris Wong

Chris has always had a interest in computers from the moment he acquired his first hand-me-down PC running Windows 95 at the age of 6. Since then he has deepened his knowledge on both the software and hardware aspects of PCs. After acquiring a more formal education and broadening his skillset, Chris hopes to make a strong entrance into the IT industry.

### Felipe Lemos Villaça

Felipe always had an affinity for technology, computers, and enjoy problem solving. This made him pursue a diploma in Computer Systems Technology, hoping to work as a Web Developer after graduation.

### Ian Weber

Ian, like a majority of his generation, grew up in close proximity to computers. After two years of English and his time in CST, he has discovered his intent to work as a fully-fledged software engineer. After finishing the program, he hopes to work as a desktop app developer and then return to school.

### blue (solutions) inc

Known colloquially as BlueInc, blue (solutions) is a Victoria based technology company, focused on multimedia web and desktop applications. Founded in 2001 by Brian Woodman, the company also provides project management support and particular expertise in digital mapping technologies.

The MyClassOnline development team would like to thank our sponsor, Brian Woodman of Blueinc, and the staff and faculty of Camosun College.
