

# JCS Team Bio

## Who is Team JCS?

Team JCS consists of Jeevenn Sangara, Cody Bergin, and Sam May. JCS developed the Ministry of Environment's (MoE) Social Media Support Application (SMSA). Our Project Sponsor Diana Demarchi's vision is to increase information accessibility for endangered wildlife, via social media.

## What are we making?

SMSA is a data access and automation program designed to pull information about chosen threatened species from MoE-provided data, and post it to social media on a weekly schedule.

All of Team JCS are second year students in the Camosun College ICS Program; who have become familiar with multiple programming languages, working with databases, and system administration tasks.

**Jeevenn Sangara** - Jeevenn Sangara joined this project because he liked the applicable experience of working with social media APIs, and the relevant experience of working for an institution like the Ministry of Environment.

**Sam May** - Sam May is interested in the technical side of social media and data manipulation. Through this project, Sam enjoyed gaining experience working for a government institution.

**Cody Bergin** - Cody Bergin's appreciation of logic puzzles led him to this project because he enjoys the challenge of building a program that requires complex data access and manipulation.

## Conclusion

It has been a pleasure to work with our Ministry of Environment representative Diana Demarchi to bring this project to life. The real world experience we have gained on this project will be invaluable in the future. Thank you to the Camosun College staff and Diana Demarchi for this opportunity.
